Additions & improvements

- Core] Tablesorter added to alert configuration page.
- Core] Increased the maximum size of node names to 150 characters.
- Core] Added rotation of Esia log files.
- Core] Uniform Debug parameter on send_sms.
- Core] Improved LDAP on Infinity
- Report] Addition of the "service technical name" column to the "Service Graph" block
- Report] Addition of the column "technical name of the service" for the "Service incident" block
- Report] Added "Duration" column to "Hardware Incident" block
- Switch] Overhaul of the display of the mac-address table (Infinity)

Packaging

- Packaging: No more overwriting partners' apache2 conf.
- The man_backup_esia script is configured with the old postgres 9.4 conf files.

Bug fixes

- core] No display of services on hover over nodes or groups of nodes
- core] The background colour of section titles does not fill the entire bar if the title does not contain any text
- core] The services in maintenance page displays services that are being deleted.
- core] RRDs don't work if node name contains a slash.
- core] Ability to add a new licence before the old one expires.
- core] Empty lines in esia log file.
- core] LDAP user displayed in log file instead of real user
- core] Unity thinks it is connected when in fact it is disconnected on the ESIA server side.
- core] SMS send_alert sends critical or alert when service returns to OK
- core] SQL function get_TimeError does not take into account a specific case
- core] Table of alerts: cannot sort on parent group and error level
- core] The gesa WMI file logs a syntax error (Unity x86)
- core] Fixed node calculation for Mercury
- core] Removal of references to Google maps
- server] inability to use simplified addition to add Windows disks due to a character.
- [report] hardware incident block, there are 2 inverted columns
- report] No incident detected when the node is not in a node group.
- report] Availability of node groups "representation in a single diagram" gives an empty graph
- report] Report module send_mail not working like alerting send_mail
- report] Confusion in the display of services that are part of the same plugin.
- dashboard] Application chain widget crashes when an associated service is deleted.
- dashboard] Problem displaying the alerts table header.
- plan] Links between objects go in all directions when editing the plan.
- plan] Unable to link an arrow (link) to a service.
- plan] Can't upload an image if the file extension is in upper case.
- plan] Error log when closing the link config dialog.
- import] The "Show/hide columns" button in the module title bars is out of alignment.
- API] Bad info on node group status
- patterns] The default_switch plugin pattern is empty
