

The different ESIA solutions

ESIA, your company's co-pilot, we offer four solutions adapted to the various scenarios you may encounter.

ESIA UNITY

A supervision solution designed for very small businesses, it can be deployed in just a few minutes and is fully managed via a cloud interface. The UNITY box can also be used with our INFINITY solution.

ESIA GALAXY

A standalone solution, GALAXY is ideal for meeting the needs of growing SMEs. Fully standardised, GALAXY benefits from greater processing power and a local interface. This solution is stand-alone or can be used as a server satellite.

ESIA INFINITY

A customised solution, the aim here is to model our solution on your objectives by customising our solution to achieve the objectives you have defined. More than 3,000 plugins are available, which you can also create and add to INFINITY. This solution is designed for large networks requiring the processing of a large number of supervision points.

ESIA MERCURY

Our centralising platform enables you to collect all the supervision information generated in our UNITY, GALAXY and INFINITY solutions. With a single interface, you have a global view, whatever the solution chosen and installed by your partners.
