

# SNMP activation on Plug & Track probes

This tutorial has been made available to the entire Esia community thanks to the contribution of our partner Rcarré.

Their website: <https://www.rcarre.com>

Connect to the Web interface of your probe by entering the IP address.

Click on "System Configuration", then on the "SNMP" tab and identify yourself.

A screenshot of a web-based configuration interface. On the left, there is a vertical navigation menu titled 'System Configuration'. The menu items are: Network, POST Client, Lock Order, Telnet, SNMP (which is highlighted with a red rectangular box), Network Time, TCP Access, and 1-Wire Interface.

Once logged in, change only the "Read Community" parameter to "ESIA" and leave the other parameters at their default values.
