Enabling SNMP on Proxmox

To configure snmp on your Proxmox hypervisor, you first need to install the snmpd package with the command :

copy

```
apt-get install snmpd
```

Then edit the configuration file :

copy

```
nano /etc/snmp/snmpd.conf
```

Change the line (or put it as a comment) and replace it with :

```
agentAddress udp:127.0.0.1:161
```

by

copy

```
agentAddress udp:0.0.0.0:161
```

The next step is to configure the SNMP community:

copy

```
rocommunity read_community default
```

or rocommunity “ community name ” “ range ip (unique ip) /subnet mask ”.

copy

```
rocommunity read_community 10.7.0.14/32
```

Then restart the SNMP service by typing :

copy

```
/etc/init.d/snmpd restart
```
